MARINE SERVICES

BROOME'S
MARINE SERVICES
ARE READY FOR
GROWTH

DID YOU KNOW?

The Port of Broome is a key logistical gateway for the Kimberley region and has supported the offshore oil and gas industry for over 45 years. The Port is managed by the Kimberley Ports Authority (KPA) and supports livestock export, offshore oil and gas supply vessels, pearling, fishing charter boats, cruise liners and is the main fuel and container receival point for the region. The Port operates 24 hours 7 days a week.

FIND YOUR FUTURE IN BROOME

The Port is strategically placed to service growing industries in the Kimberley and has a comprehensive range of logistics and transport service agencies available for port users.

The Port's highly trained workforce can provide stevedoring services with 45 tonne, 100 tonne and 250 tonne cranes being available on the wharf. Pilotage and towage services to ensure safe shipping activities are provided by third party contractors.

KPA has approximately 19 hectares of land located in close proximity to the wharf available for lease. In support of investment in facilities close to the Port, KPA obtained \$24 Million in funding from the State to extend the life of the original wharf with works to commence towards the end of 2015.

The Port will continue to actively support operations in the Browse Basin, a world class petroleum region that is estimated to contain 25 percent of Australia's gas reserves.

Broome is also home to the Broome Maritime Simulation Centre (BMSC) based at the Kimberley Training Institute.

The Centre specialises in state of the art maritime simulation services for new and existing ports. It provides services for the research and design phases of new port development, through to training and operational procedures. The BMSC has carried out numerous projects for Australian and international clients over the past 8 years and is the only centre in Australia endorsed to deliver Seaways accredited training for ASD operations.

There are many commercial opportunities to develop and grow alongside the Port in support of existing businesses, with significant growth expected in the onshore exploration and development of hydrocarbons and other expanding industry sectors.
